PLANT FACT SHEET

Ribes griffithii Hook. f. & Thomson

GENUS *Ribes* **FAMILY** Grossulariaceae

EDIBLE PARTS AND USES

Edible parts: Fruit

DESCRIPTION

An erect shrub. The leaves have stalks. They have 3-5 lobes. They are 3-7.5 cm long and with teeth. They are heart shaped and the tip is pointed. The leaves are hairy along the veins underneath. The flowers are in loose hanging clusters. These are 8-15 cm long. There are narrow bracts that are longer than the flower stalks. The flowers are yellowish-green to red. They are 5-7 mm wide. The fruit are red berries.

HABITAT

It is a subtropical plant. It grows in the Himalayas. It grows between 3,300-4,300 m altitude. In Sichuan and Yunnan.

NOTES

There are about 150 Ribes species.
