PLANT FACT SHEET

Serratula coronata L.

GENUS *Serratula* **FAMILY** Asteraceae

COMMON NAMES Crown sawwort

EDIBLE PARTS AND USES

Edible parts: Leaves

The young plants are boiled and the bitter taste soaked and rained off then it is seasoned and eaten cold.

DESCRIPTION

A robust herb. It keeps growing from year to year. It grows 50-140 cm high. The branches appear at the uppermost leaf axil. There are leaves at the base and along the stem. The leaves are 40 cm long by 12 cm wide. They are divided into narrow segments along the stalk. There are 3-8 segments that are unequal in opposite sides. There are teeth along the edge.

HABITAT

It is a temperate plant. It grows on the edges of forests on mountain slopes between 100-1,600 m above sea level in north China.
