PLANT FACT SHEET

Ampelocissus multistriata (Baker) Planch.

GENUS *Ampelocissus* **FAMILY** Vitaceae

EDIBLE PARTS AND USES

Edible parts: Fruit, Seeds

DESCRIPTION

A large climber. The stems are hollow and have fine lines along them. The leaves have 5 leaflets. They can be simple and have 5 lobes. The leaflet blade is 22 cm long by 11 cm wide. The side leaflets are smaller. The flowers are in a branched cluster. They are on a stalk 11 cm long. There are tendrils below the flower stalk. The fruit is about 1 cm long. They are narrowly oval. The seeds are dark brown and 9 mm long by 4 mm wide.

HABITAT

A tropical plant. It grows in savanna scrub. It grows along rivers.

NOTES

There are about 95 Ampelocissus species.
