PLANT FACT SHEET

Canarium patentinervium Miq.

GENUS *Canarium* **FAMILY** Burseraceae

COMMON NAMES Woodland kedongdong

EDIBLE PARTS AND USES

Edible parts: Seeds, Nuts, Fruit

The flesh of the fruit is eaten. It is also sometimes pickled.
The kernel of the nut is eaten.

DESCRIPTION

A tree. It grows up to 40 m tall. The trunk can be 50 cm across. It can have buttresses. The leaves have 2-5 pairs of leaflets. The flowering stalks are 6-8 cm long. They can have 4 fruit. The flowers are in groups that are spreading and hairy. The fruit is fleshy and oval with a stone inside. It is 3-6 cm long by 2-3 cm wide. The fruit are green and oval. It contains 1-3 seeds.

HABITAT

A tropical plant. It grows in primary forest and up to 1150 m altitude above sea level.

PRODUCTION

Cultivation

Plants are grown from seeds.

Harvesting and Seed Production

Flowering is mainly November to May.

NOTES

There are 80-95 Canarium species.
