PLANT FACT SHEET

Filipendula camtschatica (Pall.) Maxim.

GENUS *Filipendula* **FAMILY** Rosaceae

COMMON NAMES Giant meadowsweet

EDIBLE PARTS AND USES

Edible parts: Leaves, Root

DESCRIPTION

A clump forming plant which has tubers. It grows 1.2-3 m tall. It spreads 60 cm wide. The leaves are large and dark green and spreading. They are deeply divided and have deep teeth. The end leaflet is rounded. The white flowers have a scent and are in loose panicles.

HABITAT

A temperate plant. They grow well beside pools. It is best in damp to wet soils. It needs a sunny location. It suits hardiness zones 3-9. Hobart Botanical Gardens.

NOTES

There are about 10 Filipendula species. They are usually in moist soils in northern temperate regions.
