PLANT FACT SHEET

Angelica cartilaginomarginata (Makino) Nakai

GENUS *Angelica* **FAMILY** Apiaceae

EDIBLE PARTS AND USES

Edible parts: Leaves

DESCRIPTION

A herb. It completes its life-cycle over 2 years. It can grow 1.5 m tall. The root is short and cone shaped and branched. The stem is often single and with thin ribs. The lower leaves have long leaf stalks. These widen into sheaths . The leaves are divided once or twice. There are 3-9 pairs of leaflets. These have 2 or 3 lobes.

HABITAT

It is a temperate plant. In north China it grows between 300-1,000 m above sea level. It grows in grasslands and on the edges of forests.

NOTES

There are 50 Angelica species. They are temperate plants.
