PLANT FACT SHEET

Protium javanicum Burm.f.

GENUS *Protium* **FAMILY** Burseraceae

COMMON NAMES Trenggulun tree, Tengulun tree

EDIBLE PARTS AND USES

Edible parts: Leaves, Fruit

DESCRIPTION

A shrub or tree. It can grow 9-25 m tall. The trunk is often short and crooked. This can be 40-115 cm across. The branches can have spines 7 cm long. The leaves are opposite and narrowly oval. There can be teeth along the edge. The flowers are in groups. The fruit is a berry and purplish-green but turns red to black when ripe.

HABITAT

A tropical plant. It grows in dense primary forest. It grows up to 800 m above sea level. It is more common in regions with a distinct dry season

PRODUCTION

Cultivation

Plants can be grown from seeds.

Harvesting and Seed Production

It can flower and fruit throughout the season.
